More often than not, the reports contain very little matter on which any orders of Govt will be necessary

It is therefore respectfully submitted that in future, only such suggestions of the Sanitary authorities as can not be attended to by the local bodies concerned without the help of Govt may be reported to Govt for orders Meanwhile a para may be devoted thereon in the annual D.F. and Md administration reports to give the several important general suggestions made by the Sanitary authorities in regard to the improvements of towns and villages and how far these suggestions were carried out during the year together with a short explanation for not carrying out those which were not attended to during the year under review

Office of the Deputy Commissioner,
Mysore Dis trict
Dated, Mysore, 24th July 1915.

A. Subramanya Iyer, Esquire., B.A.,
Deputy Commissioner,
Mysore District

V R Thyagaraja Iyer, Esquire., M.A ,
Secretary to the Government of
His Highness the Maharaja of Mysore,
Revenue Department, Bangalore

r,

In submitting herewith letter No 2486 dated 28-11-1914 from the Sanitary Commissioner in Mysore forwarding a copy of e notes of inspection by the Deputy Sanitary Commissioner in the Taluks of Nagamangala and Mandya in October 1914, I have - honor to state as follows -

Nagamangala Municipality The Deputy Sanitary Commissioner proposed the following improvements in the town -

(a) Demolition of ruined houses and the allotment of these ses for the building of new houses

(b) The sinking of more wells in selected and suitable lo- lities covered at the top and fitted up with pumps

(c) Daily conservancy system and providing good drains

(d) Construction of a slaughter house

The above subjects were placed before the Municipal Board The Board are of opinion that the sinking of more wells in the town t be undertaken as there is not much probability of tapping water in

them

From 1911

The Deputy Commissioner, Nyasaland.

To

The Secretary to the Govt. of Nyasaland

re improvements to be in the Islets of Nganungu and Mandya.

them and that the work may be taken up when suitable sites are found. The daily conservancy system and providing good drains involve a very large outlay and the present low financial condition of the Municipality will not admit the undertaking of costly works. The construction of a slaughter house and the demolition of ruined houses will be undertaken as funds permit - every year.

It is proposed by the Deputy Sanitary Commissioner that the 'Dead House' which is very close to the dispensary and the Taluk Office as also to the weekly Santhe, should be removed to a more distant locality where there is some privacy The District Medical Officer seems to think that the building may be repaired and enclosed in a compound wall and kept under lock and key. This is a subject for the consideration of the Senibr Surgeon It is observed that by the Deputy Sanitary Commissioner that the flooring of the A V. School is in a wretched condition, and that the play-ground and urinal or latrine are attached to the building. He proposes that benches may be provided for the use of pupils It is a matter for the consideration of Inspector General of Education. The marginally noted

1 Honakere, 2. Chinya, 3. Upparahalli)
4 Mulakatte, 5 Chowdanahalli, 6 Tolali) villages in the
7 Devalapur.) Nagamangala Taluk

were also visited by him It has been proposed that good drinking water wells should be provided in Honakere, Chinya and --- Chowdena Hally Villages.

The sinking of new wells wherever necessary and improving and repairing the existing ones will be undertaken to a larger extent as funds are available under the Village Improvement -- Scheme, and from the special allotment sanctioned to this District, in addition to the well works which the District Board will execute

The following sanitary improvements have been recommended by the Deputy Sanitary Commissioner.-

(a) The filling up of a small pond right in front of the

the Honnakere village

(b) Removal of manure pits in Chinya, Upparhally, Tolali and Devalpur Villages.

(c) The draining of the stagnant water in Upparhally village It is said that aloe-fibre is striped in this water -- which emits a very bad smell.

(d) Improvement of country roads.

(e) Construction of drains in Devalpur village to carry off storm-water. The above suggestions have been referred to the Taluk Board and the Village Committees and needful action will be taken in giving effect to the said measures.

Mandya Municipality. The Deputy Sanitary Commissioner has proposed (1) the filling up of burrow-pits in which manure is stored,

(2) the sinking of more wells in different parts of the town and fitting them with pumps,

(3) the construction of a slaughter house,

(4) extension of the Punchayma burial ground and the selection of a suitable cremation ground as the existing one is not fit for the purpose. The Municipal Council have resolved that the sinking of more wells be undertaken as funds permit, that the daily conservancy system be brought into force after the town plan is prepared and conservancy lanes are opened, that action be taken under sanitation rules if the burrow-pits are not filled up by the parties concerned within a prescribed time and that provision be made for constructing a slaughter house, if funds are available.

The marginally noted places were also inspected by the -- Deputy Sanitary Commissioner The removal of toddy shop which is in right front of the school and the closing of a pit to the north of the school where nuisance is being committed have been recommended for the Besaral village The employment of a peon for the school has been proposed As regards the proposal to

1 Basaral, 2 Hosahally, 3. Chickmandya 4 Satnur, 5. Gopalpura 6 Kalhally, 7. Induval, 8 Gundhally 9 Holalu, 10 Sivahally, 11. Maddur, 12 Channahally.

to remove the toddy shop, necessary action will be taken in the Excise Department. The last proposal for the consideration of the department concerned, and the filling up of the pit will receive the attention of the Taluk Board The improvement of village roads, the sinking of more wells, removal of manure pits and improving Village Sanitation are the most important measures suggested by the Deputy Sanitary Commissioner. These matters have been referred to the Taluk Board and the Village Committees concerned and the defects noted by the Deputy Sanitary Commissioner will be rectified soon as far as possible, Steps will also be taken for the repairs of the village Chavadi at Holalu and for providing a parapet wall and a pully to the Panchama well at Chamanally It has also been brought to notice that there are many burrow-pits in this village, that a new house is being built without a license and that a false measure is being used in the local grain shop. Steps will be taken to get these defects rectified soon

The following suggestions regarding the Maddur Municipality have been referred to the Council for early action.

(a) Daily conservancy,
(b) Drainage improvement,
(c) Construction of a slaughter house,
(d) The extension of the town

The last point has already engaged the attention of the Council and the remaining proposals will have to be carried out as funds permit, the Municipality being a poor one

SUBJECT

Forwarding a copy of the notification by the D.C. Bangalore of certain towns and villages in the Mysore District.

29/11/14

Enclosure to Govt. 67-75-1

Notes of inspection of General Sanitation by the Deputy Sanitary Commissioner in Mysore from the 21st to 31st October 1914 in certain taluks of the Mysore ~~and Bangalore~~ Districts.

----- O -----

Nagamangala - Population 2500 There are 560 inhabited houses and 120 houses in ruins These latter require to be demolished and the sites either built upon or kept clean. A large pond below the tank bund supplies drinking water to the people This is open to gross pollution in spite of a watchman kept there. Two of the six Government wells contain palatable water but comparatively few people resort to them. More wells sunk in selected and suitable localities, covered at the top and fitted up with pumps, would supply unpolluted water to the people This deserves the consideration of the Municipality There is no daily conservancy at all There are hardly any good drains Drainage improvements appear to be beyond the present means of the Municipal Council There is no slaughter house The flooring of the Anglo Vernacular School building is in a wretched condition Pupils of the infant classes squat on the floor Benches should be provided for them. There is no play-ground and no urinal or latrine

Examined the Birth and Death Register and found the entries up-to-date Births are far more than the deaths, some of which are returned as being due to consumption The Dispensary records do not show that this disease is at all

all common Instructed the Patel to enter the births and deaths in the register as soon as possible after their occurrence The Post Mortem room is about 30 feet from the Dispensary and the Taluk Office Quite close to it the weekly " Santhe " is held It should be removed to a more distant locality where there is some amount of privacy

Honkere - Population 289 Houses about 60 For Village Improvement, this village is included in Chinna to form a Village Improvement Committee In the whole of this Taluk, Village Improvement Committee have been formed but no work has been done in any village, as people were busy till now in collecting fodder for their cattle Now that the taluk has had some rain, the Committees are expected to begin work on village improvement The people have to go to a neighbouring stream for drinking water as both the wells in the village have brackish water A well sunk near the stream will perhaps give a purer and more lasting supply The Village Improvement Committee have to deal with this question Examined the Birth and Death Register and found that 1 birth in October has not yet been entered The Patel was asked to enter the births and deaths as soon as possible after their occurrence. A small pond right in front of the village has to be filled up

Chinna - Population 1047 Houses about 250 There is a proposal to form this into a Union There is a small reading room where people are said to meet every Saturday to hear extracts from papers etc read The Village Improvement Committee have to repair the temple, sink new wells and repair

repair the 2 old ones which are in a neglected state The people get water from 2 step wells near one of which are 2 manure pits full of stinking manure. The Amildar promised to look to this matter

Upparhalli - Population 369 Houses about 80 There are a number of manure pits in front of the village The Amildar promised to have the manure removed to fields and have the pits filled up There is a collection of stagnant water in which aloe fibre is striped, the whole emitting a very bad stench The water can be drained off and the nuisance abated The Amildar promised to look to this Drinking water is got from 2 wells outside the village The Birth and Death Register ~~were~~ was examined and found to be all-right

Mulabatte - Population 633 Houses about 120 The Village Improvement Committee should take up the following works. Opening a road to the temple, sinking a well in front of it, and improving the road which leads to the Nagamangala Road A draw well and a step-well supply water to the people The latter is open to much pollution The opening of a village school is in contemplation The Birth and Death Register is all right

Chowdenahalli - Population 52 Houses about 25 The Village Improvement Committee should sink a well as the people have to go far for drinking water The road leading to the village requires looking after Examined the Birth and Death Register and found it to be all-right

Tolali - Population 147 Houses about 45 The manure pits in front of the village have to be filled up The Birth and Death Register was not

not available as the Sheikdar had taken it away

Devalapur - Population 920 Houses about 200 There is a good school with 90 children, The flooring is very bad and requires immediate attention The walls are also in need of repair A new building is perhaps more desirable The people have promised to contribute Rs 150/- for this purpose The tank supplies drinking water as the 15 wells all contain brackish water In hot weather wells are sunk in the bed of the tank There are a number of manure pits in the village which require to be closed Drains have to be made to carry off storm water The Birth and Death Register were examined and found correct

Mandya - Population 4191 Houses about 800. There are a number of borrow pits in the town which have to be filled up Many have manure stored in them Only about 10 houses are conserved daily, the rest having shallow pits cleaned twice a year At the time of my visit, the people were living in sheds A number of temporary latrines have been run up and they are conserved daily The fields surrounding the camps are resorted to by the majority of the people All the important streets in the town have good drains A large pond near the Dispensary supplies the people with drinking water The pond is filled during rains with surface drainage water collected through open channels The water is nothing better than sewage very greatly diluted There are 3 Government and 2 private wells in the town having palatable water but comparatively few people resort to them. The Municipality should consider the question of having more wells in different parts of the town

town and fitting them with pumps There is no slaughter house and the Municipality is said to be able to afford building one At present the sheep are slaughtered in a small enclosed space behind the mutton stall The place is kept clean There is a proposal to extend the town by acquiring 5 acres to the north of the Traveller's Bungalow The site was inspected and pronounced fit for the purpose if water could be tapped The Panchamas have a narrow strip of land as a burial ground An extension is very necessary Approved of the site proposed for its extension The cremation ground is situated in a most objectionable place, just by the side of the public road from Basral to Mandya The feelings of the mourners as well as of the public obliged to use the road are outraged whenever a cremation takes place The Municipality should immediately select a more suitable cremation ground where there is some amount of privacy

Basral - Population 1255. Houses about 250 This is one of the numerous villages in the Mandya Taluk which though containing more than 1000 people are not formed into Unions Reasons for this state of affairs are not forthcoming There is, in this village, only one Government well yielding drinkable water All the other 15 wells give brackish water A Village Improvement Committee has been formed but no work has been done The streets are in a filthy condition and impassable during rains There is a new school building capable of holding about 100 children There are already 108 on the rolls and question of its extension is bound to crop up sooner or later There is a toddy shop right in front of the school

school and children can see the toddy drinkers All teaching regarding the evils of drink, is nullified by the children seeing their elders indulging in it The sooner the toddy shop is removed to a more suitable place, the better for the school children There is a pit to the north of the school building, in which nuisance is committed by the passers by This should be closed There is no peon or sweeper on the school establishment The necessity for one is apparent Examined the Birth and Death Register and found the entries all right Out-break of small-pox was not reported to the Taluk Office

Hosahalli - Population 200. Houses about 75 The Village Improvement Committee formed The road leading to the village is in a deplorable condition The tank which is polluted in all possible ways, is the only source of water supply The Birth and Death Registers could not be examined as the Patel was away

Chickmandya - Population 250 Houses about 60 No Village Improvement Committee formed The streets themselves form big drains Water is stagnant everywhere The Village is kept very dirty The Government well is not used on the plea of the faulty position of the pulley Requested the Sheristadar in charge of the Taluk to remedy it The people now getting drinking water from another well close by and which has no parapet wall Examined the Birth and Death Register and found the entries up-to-date

Sathanur - Population 1220 Houses about 350 This is not a Union and there is no Village Improve-

Improvement Committee The Patel did not produce the Birth and Death Register saying that it was with the Shanbogue who was not in the village at the time There are a few drains but they are full of stagnant, stinking sewage Roads are altogether uncared for Water supply is from the tank

Gopalpura - Population 483 Houses about 100 No Village Improvement Committee Water supply is from a tank and from a well in the bed of the tank The wells in the village have brackish water Examined the Birth and Death Register and found the entries up-to-date Village sanitation quite neglected

Kalhalli - Population 160 Houses about 50 No Village Improvement Committee The village is very dirty The villagers say that the toti refuses to clean the streets The Patel takes no interest in the welfare of the village Examined the Birth and Death Register and found that one birth which had occurred 10 days ago has not been entered The Police Inspector gave the information as the Patel is said to be interested in concealing the birth A tank and 2 wells supply the people with water

Induval - Population 540 Houses about 100 The village is fairly clean. Examined the Birth and Death Register and found the entries up-to-date A pond with foul water in front of the village has to be filled up There is only 1 well for drinking water No Village Improvement Committee

Sundahalli - Population 721 Houses 120 The village is fairly clean There are no manure

manure pits The people have 2 wells and a tank as sources of water supply A private school with 17 children has been opened Advised the members of the Village Improvement Committee to collect some money for a school building and ask for a Government grant The Birth and Death Register was found to be all right

Holalu - Population 1289 Houses about 260 The village is not a Union As there are numerous ~~castes~~ in the village, the formation of a Village Improvement Committee appears to be impracticable The streets are narrow and very dirty Many houses are also overcrowded The school-house is very bad and the flooring is wretched The open space in front of the school is kept very dirty There are 2 tanks and a few wells as sources of water supply When the tanks dry up, there is said to be great difficulty for drinking water The Birth and Death Register was examined and 1 birth which occurred some days ago has not yet been entered The village chavadi is in a ruinous condition and no efforts are made to repair it

Sivahalli - Population 682 Houses about 120. The pond in front of the village has very filthy water and should be filled up. The Village Improvement Committee has to attend to the repair of the temple, formation of a school and sinking of new wells The existing wells and tank do not supply sufficient water The streets are kept very dirty, sewage stagnating in them Manure heaps in pits with stagnant water are too near the village These should be removed far into the fields Examined the Birth and Death Register

Register. Three deaths which occurred in October have not been entered. Instructed the Patel to make the entries as soon as possible after the occurrences

Maddur - Population 2210 Houses about 500 One portion of the town is surrounded by paddy fields and on account of its low level, the houses are damp and the inhabitants suffer from fevers apparently malarial Water supply is from the river channel in the rainy season and from a number of wells in the summer The proposal to sink a deep well in the bed of the stream, to pump the water and to supply it through pipes, appears to be very feasible There is no daily conservancy The drains too are very imperfect. There is no slaughter house, the butcher slaughtering the sheep in his own house This is very objectionable The premises of Girls' School are unsuitable, dark and ill-ventilated There is no peon or sweeper The necessity of one is apparent The Birth and Death Register was examined and the entries were up-to-date Four deaths were due to small-pox and the local Sub Assistant Surgeon was not aware of the fact The town is badly in need of extension and the people are anxious to remove from the low-lying tracts and build fresh houses in a more healthy place Inspected the proposed site for the extension and approved of it The undermentioned Survey numbers should be acquired, roads and drains formed, a few wells sunk and the sites given out for building purposes No 819 (1 & 2), 825, 826, 827, 828, 829, 830, 818, 817, 811 and 824

Chamanahalli - Population 1322. Houses about 320 The well set apart for Panchamas should

should have a parapet wall and a pulley There are many borrow pits full of stagnant water and in some cases of manure These should be filled up A new house is being built without any license being obtained Called the attention of the Sanitary Inspector to this The Birth and Death Register was examined and 3 deaths and 1 birth had not yet been entered Asked the Patel to make the entries as soon as possible after the occurrences Many people complained of a false measure used in the local grain shop Asked the Sanitary Inspector to take the measure referred to and bring it to the notice of the Officer in charge of the Talu No Village Improvement Committee The village is fairly clean Water supply comes from 3 wells
